DETAILED ACTION

Information Disclosure Statement

1. The Examiner has considered the information disclosure statement (IDS) submitted on 5/26/06.

Claim Rejections - 35 USC § 102

- 2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-3 and 5-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Harris et al. (7,002,325).

Harris et al. disclose a clocked cascading current mode regulator with high noise immunity and arbitrary phase count in Figs. 1-3. In Fig. 1, a switch controller (105), the switch controller to receive a first control signal (PHASE) and responsively generate a drive signal (UGATE and LGATE) operable to enable a power switch (Q1and Q2) and to receive a second control signal (BOOT) and responsively generate the drive signal

Application/Control Number: 10/830,171 Page 3

Art Unit: 2838

operable to disable the power switch (Q1and Q2) wherein the first control signal and the second control signal are representative of a PWM drive signal and forming the switch controller to generate a control output responsively to the first control signal and the second control signal. A third control signal (PH_IN/PH_OUT). See col. 4, line 21 to col. 5, line 55.

Response to Arguments

4. Applicant's arguments with respect to claims 1-3 and 5-20 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adolf Berhane whose telephone number is 571-272-2077. The examiner can normally be reached on Monday- Friday 8 AM to 6 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Karl Easthom can be reached on 571-272-1989. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/830,171

Art Unit: 2838

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
